SUMMARY

Frontend engineer: writing code since 2020 and React since 2021, building for clients since 2022, and 3+ years in professional roles building production interfaces in React, Next.js and TypeScript. I care about the details that make a UI feel fast and correct: component architecture, state management, accessibility, Core Web Vitals and clean design systems. I have shipped high-volume Web3 dashboards, e-commerce storefronts, real-time maps, a live football platform and healthcare systems, working across React, Next.js, Tailwind CSS, Astro, WordPress and Shopify. I also connect frontend work to backend reality (Node.js, PostgreSQL, real-time data) when a feature needs it end to end.

PROFESSIONAL EXPERIENCE

Founder & Technical Lead — Estudio Ve

2026 – Present

Digital product studio · Remote, Argentina · estudiove.com

- Founded the studio; built Avi Salud's public website, focused on clear information architecture and a fast, accessible UI.
- Tech lead of a two-developer team on Avi Salud's internal operations system (Next.js 16, React 19, Server Components, strict TypeScript) that replaced Excel and WhatsApp for non-technical office staff.
- Own component design and UI decisions end to end, from Figma-level thinking to production React code.

Product Engineer & Technical Lead — Harmonica

Mar 2025 – Apr 2026

Digital agency, US market · Remote

- Built and maintained frontend experiences in Next.js, WordPress and Shopify for 10+ US clients across e-commerce, wellness, personal brands and corporate sites.
- Improved Core Web Vitals, load performance and technical SEO using Lighthouse, Google Analytics 4 and Search Console.
- Translated client feedback into UI decisions directly, working in English day to day.

Frontend Developer & Consultant — Claridad

Dec 2024 – Sep 2025

Civic safety platform · Mar del Plata (part-time) · claridad.ar

- Sole frontend engineer in a small team building a collaborative safety map: React UI, mobile adaptation, real-time alerts and an interactive map with geolocated reports.
- Owned the UI/UX from first prototype to the version tested publicly in hackathons.

Frontend Developer — Smithii

Jun 2023 – Dec 2024

Web3 products · Remote (United Arab Emirates) · smithii.io

- Built high-volume Web3 dashboards and tools for tokens, liquidity, airdrops and staking with React, Next.js, TypeScript and Chakra UI.
- Worked across three product areas — public tools, internal management software and a standalone staking builder — keeping the UI fast under complex, high-frequency data.
- Delivered end-to-end frontend features within a Scrum team, tracking work in Jira.

PROJECTS

Pelotita — Founder & sole engineer *pelotita.com.ar*

Live football platform: scores, standings, stats, editorial content and real-time fantasy leagues

- Built the Next.js 16 / React 19 / Tailwind v4 frontend for live scores, standings, cup brackets and a real-time fantasy draft, fed by a custom WebSocket layer.
- 160k+ Google Search impressions in its first two months; 10k+ matches processed across Argentina's top divisions, Europe's top 5 leagues and continental cups.
- Also own everything behind the UI: self-hosted PostgreSQL and Redis on a VPS behind Cloudflare, with GitHub Actions CI/CD — 360 commits in six weeks as the only engineer.

- **Busy (clothing e-commerce):** founded the brand and built the full storefront, content and design. With no physical shop, it ranked for clothing searches in Mar del Plata through technical SEO.
- **First client project (2022):** Bestseller Group — website for a P2P USDT exchange, in vanilla JavaScript and PHP on Apache.
- **Presidential Simulator:** independent game I design and build solo — UI, game systems and TypeScript.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, Chakra UI, Astro, WordPress, Shopify, component architecture, accessibility, design systems, real-time UI (WebSockets)

Performance & growth: Core Web Vitals, Lighthouse, technical SEO, Google Analytics 4, Search Console, Semrush

Backend & data: Node.js, PostgreSQL, Redis, Supabase, Firebase, REST APIs, Java

Tooling: Figma, Git, GitHub Actions, Playwright, Jira, Scrum

EDUCATION & TRAINING

Programming coursework — UTN Mar del Plata (2022, not completed) · Ontological Coaching training: communication, team leadership and difficult conversations — Argos (2025 – 2026)

LANGUAGES

Spanish (native) · English (intermediate, B2 certification in progress — daily written work with US clients)
