SUMMARY

Product Engineer and full-stack engineer: writing code since 2020, building for clients since 2022, and 3+ years in professional roles building and running web products in production. I take products from the business problem to architecture, deployment and operation: high-volume Web3 tools, real-time data platforms, internal business systems and e-commerce. I work end to end with React, Next.js, TypeScript, Node.js and PostgreSQL, and I own what happens after launch — self-hosted infrastructure, database migrations, authorization and incident handling. I have led technical delivery for 10+ clients and worked in Scrum teams using Jira.

PROFESSIONAL EXPERIENCE

Founder & Technical Lead — Estudio Ve

2026 – Present

Digital product studio · Remote, Argentina · estudiove.com

- Founded the studio; lead technical strategy, architecture and delivery of digital products for SMBs, from the initial problem to production.
- Avi Salud (home-healthcare company): built the public website and, as tech lead of a two-developer team, an internal operations system (Next.js 16, React 19, Supabase) that replaced Excel and WhatsApp for scheduling, patients, staff, plans and billing.
- Recovered a 26-table production schema that had never been version-controlled into a single versioned baseline, and designed configurable role-based access control enforced in Postgres Row-Level Security (26/26 tables audited).
- Guarded all 90 server actions with permission checks and shipped 54 migrations (~9,000 lines of SQL) on a shared production database over six weeks with no data loss.

Product Engineer & Technical Lead — Harmonica

Mar 2025 – Apr 2026

Digital agency, US market · Remote

- Took technical ownership of 10+ websites for US clients, coordinating priorities, technical decisions and delivery, communicating with clients in English day to day.
- Built, maintained and optimized Next.js, WordPress and Shopify products across e-commerce, wellness, personal brands and corporate sites.
- Improved performance, Core Web Vitals and technical SEO using Lighthouse, Google Analytics 4 and Search Console.
- Standardized development and deployment workflows with GitHub Actions while supporting several products in parallel.

Frontend Developer & Consultant — Claridad

Dec 2024 – Sep 2025

Civic safety platform · Mar del Plata (part-time) · claridad.ar

- Sole frontend engineer in a small team building a collaborative safety map: geolocated reports, communities, real-time alerts and a panic button, in React.
- Integrated data and geolocation APIs; took the product to hackathons and public validation sessions and iterated on user feedback.

Frontend Developer — Smithii

Jun 2023 – Dec 2024

Web3 products · Remote (United Arab Emirates) · smithii.io

- Built high-volume Web3 tools for tokens, liquidity, airdrops and staking with React, Next.js, TypeScript and Chakra UI.
- Worked across three areas of the ecosystem: public tools, internal management software and a staking builder launched as a standalone product.
- Optimized blockchain integrations and complex data flows to keep products fast and reliable; delivered end-to-end features in a Scrum team using Jira.

PROJECTS

Pelotita — Founder & sole engineer

pelotita.com.ar

Live football platform: scores, standings, stats, editorial content and real-time fantasy leagues

- Built and operate it solo: Next.js 16, self-hosted PostgreSQL 18, Redis pub/sub and a custom WebSocket server on a Hetzner VPS behind Cloudflare, with GitHub Actions CI/CD — 360 commits in six weeks.
- 160k+ Google Search impressions in its first two months; 10k+ matches processed across Argentina's top divisions, Europe's top 5 leagues and continental cups, with a Google AdSense monetization strategy.
- Migrated production off Vercel to the self-hosted stack with zero downtime, and moved 32 tables, RLS policies and auth data across regions with row counts verified identical.
- Cut Supabase egress by close to an order of magnitude after a near-outage by moving football data to self-hosted Postgres and rebuilding the real-time layer.

- **Abundancia (24/7 operations platform):** shifts, tasks, cash movements, receipts and balances in one place, with AI-assisted automation and data-entry bots.
- **Busy (clothing e-commerce):** founded the brand and built the full store — e-commerce, payments, content and design. With no physical shop, it ranked for clothing searches in Mar del Plata through technical SEO.
- **First client project (2022):** Bestseller Group — website for a P2P USDT exchange, in vanilla JavaScript and PHP on Apache.
- **Presidential Simulator:** independent game I design and build solo — game systems in TypeScript.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, Astro, Chakra UI, WordPress, Shopify

Backend & data: Node.js, Express, Java, REST APIs, PostgreSQL (RLS, migrations, raw SQL), Redis, WebSockets, Supabase, Neon, Firebase, MongoDB, Prisma

Infrastructure & delivery: self-hosted VPS (Hetzner), Cloudflare, PM2, CI/CD with GitHub Actions, Playwright, system architecture, technical leadership, Scrum, Jira, Figma

Growth, data & AI: Technical SEO, Core Web Vitals, Lighthouse, Google Analytics 4, Search Console, Python (scripting and scraping), LLM integrations (OpenAI, Claude)

EDUCATION & TRAINING

Programming coursework — UTN Mar del Plata (2022, not completed) · Ontological Coaching training: communication, team leadership and difficult conversations — Argos (2025 – 2026)

LANGUAGES

Spanish (native) · English (intermediate, B2 certification in progress — daily written work with US clients)
