SUMMARY

Technical lead and full-stack engineer: writing code since 2020, building for clients since 2022, and 3+ years in professional roles turning business problems into systems that ship and scale. I act as the bridge between a client's business logic and a working product: I lead architecture and delivery decisions, coordinate priorities across multiple stakeholders, and stay hands-on across React, Next.js, TypeScript, Node.js and PostgreSQL — through production, releases and incidents. I have led technical delivery for 10+ clients at once and founded a product studio from the ground up. Training in Ontological Coaching sharpens how I lead teams — not just technically, but through communication, active listening and framing hard conversations early.

PROFESSIONAL EXPERIENCE

Founder & Technical Lead — Estudio Ve

2026 – Present

Digital product studio · Remote, Argentina · estudiove.com

- Founded the studio, which designs, builds and owns digital products for SMBs end to end — from the initial business problem to production and iteration.
- Tech lead of a two-developer team on Avi Salud's internal operations system, replacing Excel and WhatsApp for a home-healthcare company; set the repo conventions and the migration process the team ships against.
- Kept a shared production database safe with no staging environment: 54 migrations over six weeks with no data loss, configurable role-based access control enforced in Postgres RLS, and all 90 server actions permission-guarded.
- Make the product, pricing and delivery calls alongside the technical ones — treating the business outcome as part of the engineering job, not separate from it.

Product Engineer & Technical Lead — Harmonica

Mar 2025 – Apr 2026

Digital agency, US market · Remote

- Held full technical ownership of 10+ US client accounts at once — architecture, stack decisions, delivery timelines and day-to-day communication with clients in English.
- Standardized development and deployment workflows with GitHub Actions so multiple products could move in parallel without stepping on each other.
- Prioritized and re-prioritized work across accounts under shifting client needs, protecting delivery quality across the whole portfolio rather than optimizing any single project.

Frontend Developer & Consultant — Claridad

Dec 2024 – Sep 2025

Civic safety platform · Mar del Plata (part-time) · claridad.ar

- Sole frontend engineer in a small, close team where technical and product decisions were made jointly, end to end.
- Represented the product technically in hackathons and public validation sessions, translating user and stakeholder feedback into concrete product direction.

Frontend Developer — Smithii

Jun 2023 – Dec 2024

Web3 products · Remote (United Arab Emirates) · smithii.io

- Delivered end-to-end features within a Scrum team for a fast-moving Web3 ecosystem, organizing work and tracking delivery in Jira.

- Worked across three product areas — public tools, internal management software and a staking builder launched as an independent product — learning to navigate complex products and client relationships, setbacks included.

LEADERSHIP & OWNERSHIP

- **Pelotita** (pelotita.com.ar): founded and run a live football platform as its sole engineer — architecture, self-hosted infrastructure, releases and incident handling. 160k+ Google Search impressions in its first two months; zero-downtime migration off Vercel and a 32-table live database migration with no data loss.
- **Ontological Coaching training (Argos, 2025–2026):** leading teams through both technical direction and communication — treating clear communication as a business asset, not a soft skill on the side.
- **Founded and ran Busy**, a clothing brand, end to end — product, e-commerce, payments, content, SEO and events — the first time I owned every business decision alongside every technical one.

TECHNICAL SKILLS

Leadership & delivery: technical strategy, system architecture, release process, incident handling, cross-team coordination, client communication, Scrum, Jira, CI/CD, GitHub Actions

Full-stack: React, Next.js, TypeScript, Node.js, PostgreSQL (RLS, migrations), Redis, WebSockets, REST APIs, Supabase, Firebase, Java, WordPress, Shopify

Growth & product: technical SEO, Core Web Vitals, Google Analytics 4, product judgment, pricing and business decisions, LLM integrations (OpenAI, Claude)

EDUCATION & TRAINING

Programming coursework — UTN Mar del Plata (2022, not completed) · Ontological Coaching training: communication, team leadership and difficult conversations — Argos (2025 – 2026)

LANGUAGES

Spanish (native) · English (intermediate, B2 certification in progress — daily written work with US clients)
